

**JOB POSTING: Field Service Supervisor
(September 2023)**

MidStates Energy Co is looking for a qualified field service supervisor to join our growing family. At MidStates Energy, we take utility and power plant projects from start to finish in expert fashion. As a one-stop-shop for commercial and industrial design, installation, and maintenance we travel to our customer locations across the country. We are partners in power. Visit our website at www.msenergy.com to learn more.

Job Description

The job duties include leading our team in assembly, vacuum oil fill, testing, and repair and maintenance of transformers. The primary work setting is outdoors and will be accomplished during all conditions. Tasks may require moderate to heavy amounts of physical effort and an understanding that electrical safety hazards may exist.

Responsibilities:

- Perform hands-on assembly, repairs, and maintenance to transformers and substation apparatus equipment. This includes mechanical and electrical connections on or inside the transformer
- Must be proficient in completing all mechanical and electrical connections, operation of the oil processor, and completing our full battery of transformer tests (i.e., Doble, Megger)
- Maintenance services such as internal tank and LTC inspections, leak and gasket repairs, parts replacements, painting, and more
- Oil processing such as vacuum filling, retro-filling, fuller's earth reclamations, degasification, dehydration, re-inhibits, including mineral oil, ester based and synthetic electrical insulating fluids, using large vacuum processing rigs and small portable processing equipment
- Assembly and dis-assembly of transformers for commissioning, relocation and de-commissioning
- Interface with the customer contacts throughout the project
- Supervising technicians will provide leadership throughout the project to support the team so that all tasks are completed safely, timely, and with the upmost quality

- Both supervisors and technicians may be required to fill out electronic reporting system throughout duration of projects
- Provide technical support and assistance to the sales team when needed for quote purposes
- Complete and submit all supporting documentation from the project accurately and timely

Requirements

- Experience required depends on whether you are applying for supervisory or regular technician roles, however, experience in transformers and substation apparatus is required
- Must be computer literate and continually display professionalism
- Must be willing travel away from home, driving or flying
- Must have a positive attitude, strong work ethic, and the desire to learn new skills.
- Must be able to pass drug and alcohol testing
- Must have a clean criminal record check / ability to obtain security clearances
- Must be actively eligible to work in the United States
- Experience in substation apparatus and transformer work required
- Experience using Doble and Megger test equipment is required
